

ESS 103 Minerals and Gems

Winter Quarter 2012

Tuesdays and Thursdays 1:30–2:20

Room 102 Johnson Hall

Lecturer: Mike Harrell
Office: 051 Johnson Hall
Phone: 206-543-0367

E-mail: mharrell@ess.washington.edu
Office hour: Tues 2:30-3:20 or appointment
Web: earthweb.ess.washington.edu/ess-103/

Teaching Assistants: Katy Atakturk
Danielle de Montigny
atakturk@uw.edu
ddvocal@uw.edu

Textbooks: The required texts are the *National Audubon Society Field Guide to North American Rocks and Minerals* by C.W. Chesterman (C), *Minerals of the World* by O. Johnsen (J), and *Gemstones of the World, Third or Fourth Edition* by W. Schumann (S).

Course Content: The lectures will begin with an introduction to the nature of minerals: their composition, structure, physical properties, and origins, with emphasis on the gem minerals. Subsequent lectures will proceed systematically through the minerals on the basis of composition and structure, and will address topics of particular interest in gemology, such as the mechanisms of color, history and lore of gems, and the conventional and unconventional uses of gems.

Laboratory: The weekly laboratory sessions in 127 Johnson Hall are essential to the course, in that they present opportunities to examine, characterize, and gain insight into representative gem and mineral specimens. A separate syllabus for the laboratories will be distributed during the first lab session. Please attend only the section for which you are registered; if you must miss your section at some point, seek the permission of the TA(s) *in advance* in order to attend another section. Laboratories will include in-class exercises and one self-guided field trip.

Readings: Topics will be assigned from the textbooks as listed on the reverse of this sheet. It will typically prove advantageous to complete each reading before that week's laboratory session.

Examinations: The mid-term examination (7 February) will cover material from the lectures, reading, and laboratory exercises. The final examination (13 or 16 March) will emphasize material from the second half of the course and will be of approximately the same length as the mid-term.

Grading: laboratory 60%, mid-term 20%, final 20%. The standard UW grading scale will be employed: faculty.washington.edu/scstroup/Gradescale.html

Week	Dates	Topics	Readings
1	3-5 Jan	introduction, definitions, crystal structures	C: 13-48, J: 11-45 S: 10-30
2	10-12 Jan	physical properties, optical properties	C: none, J: 46-73 S: 31-57
3	17-19 Jan	gem cutting, mineral environments	C: 759-781, J: none S: 61-81, 96-97
4	24-26 Jan	native elements: <i>diamond, gold</i>	C: 281-283, 343-356 J: 75-92 S: 86-95
5	31 Jan- 2 Feb	oxides, sulfates, sulfides, carbonates, phosphates: <i>ruby, sapphire, chrysoberyl, spinel, rhodochrosite, turquoise</i>	C: 357-382, 393-445, 453-457 J: 93-248 S: 98-105, 114-117, 184-193
6	7-9 Feb	Tuesday: mid-term examination introduction to silicates	C: none, J: none S: none
7	14-16 Feb	neso-, soro-, and cyclosilicates: <i>peridot, topaz, garnet, zircon, beryl, emerald, aquamarine, tourmaline</i>	C: 501, 558-590 J: 249-297 S: 106-113, 118-129, 174-175
8	21-23 Feb	ino-, phyllo-, and tectosilicates: <i>jade, serpentine, quartz</i>	C: 502-557, J: 298-394 S: 170-173, 132-165, 218-219
9	28 Feb- 1 Mar	conclusion of silicates	C: none, J: none S: none
10	6-8 Mar	non-mineral gems: <i>pearl, coral, ivory, amber, opal; imitations, synthetics, composites</i>	C: 690-691 J: 395-396 S: 166-169, 244-275

Final Examination: 2:30-4:20 p.m., Friday, 16 March, Room 102 Johnson Hall

Alternate Final Examination: 7:00-9:00 p.m., Tuesday, 13 March, Room 102 Johnson Hall

Note: Lecture topics and readings are subject to change.
